Northwire specializes in custom retractile cords, also known as coil cords, curly cords or even 'slinkies'! There are numerous applications and unique environments that can benefit from a retractile cord rather than a common straight cable.

- Aesthetics - tangle free and more appealing to the eye
- Reduce trip hazards - snaps back into place after user rather than lying on the ground
- High-flex life applications - coiled portion reduces stress points and cable wear and tear
- Handheld devices - allows the tool or pendant to move in many directions without straining
- Telescopic applications - such as portable lighting or camera equipment
- Space saver - eliminates the amount of cable that needs to be contained
- One size fits all - allows for easy adjusting to suit different operators or heights, etc.

Up to 10 foot retracted lengths with numerous custom options available:

- Extended or Working vs. Retracted Length (A)
 - NW1 uses the standard 5:1 ratio with the option to deviate
- Custom Tangent Direction and Length
 - Drop (B) or axial tangents (C)
- Common Materials
 - Hytrel®, TPUs, TPEs, BioCompatic®, PVCs
 - High temperature options available
- Custom Inside or Outside Diameter of the Coil
